

Amazon's US Fashion and Apparel Product Assortment Evolves

21st Nov, 2018

BY DATAWEAVE

As with many other product categories, Amazon has made a significant incursion in Apparel — a key battleground category in retail today. Recently, DataWeave once more collaborated with Coresight Research, a retail-focused research firm to publish an [in-depth report](#) revealing insights on Amazon's approach to its US fashion offerings.

Since our [initial collaborative report](#) in February this year, we have witnessed some seismic shifts in the category at both the brand and the product-type level.

Research Methodology

We aggregated our analytical data on more than 1 million women's and men's clothing products listed on Amazon.com in two stages:

Firstly, we identified all brands included in the Top 500 featured product listings for each product subcategory in both the Women's Clothing and Men's Clothing sections featured on Amazon Fashion (e.g., the top 500 product listings for women's tops and tees, the top 500 product listings for men's activewear, etc.). We believe these Top 500 products reflect around 95 percent of all Amazon.com's clothing sales. This represents 2,782 unique brands.

We then aggregated the data on **all product listings** within the Women's Clothing and Men's Clothing sections for each of those 2,782 brands. This

generated a total of **1.12 million individually listed products**. This expansive list forms the basis for our highlights of the report.

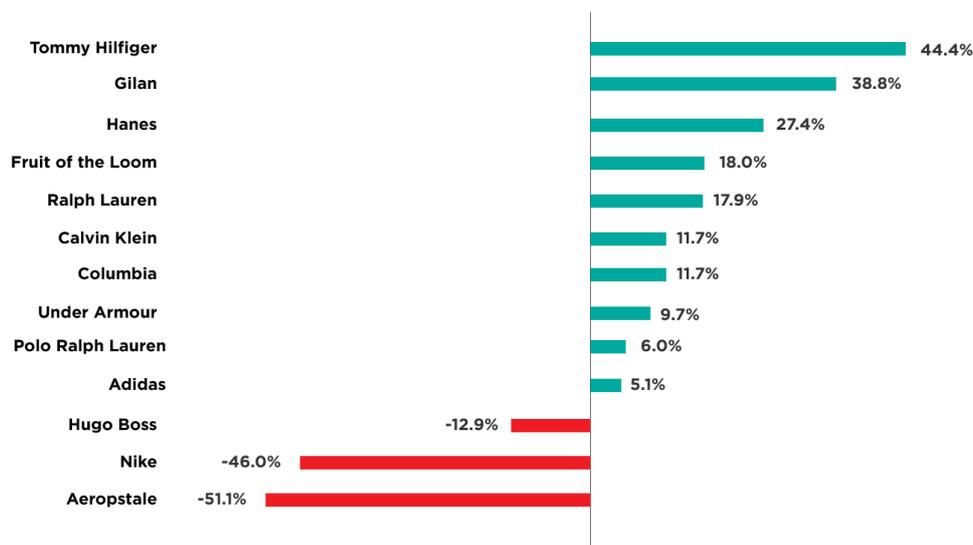

Third-Party Seller Listings Are Rising Sharply

We identified a total of 1.12 million products across men's and women's clothing — a significant increase of 27.3 percent in the seven months between February and September 2018. The drivers of this sharp spike are third-party seller listings. In contrast, the report indicates only a 2.2 percent rise in first-party listings over the same period, compared to a 30.5 percent jump in third-party listings.

In addition, Amazon has listed just 11.1 percent of all clothing products for sale, with third-party sellers offering the remaining 88.9 percent — an indication of the strength of Amazon's open marketplace platform.

A Major Brand Shift On Amazon Fashion Is Underway

In just over six short months, major brand shifts on Amazon Fashion have taken place. The number of Nike listings has plummeted by 46 percent, driven by a slump in third-party listings following Amazon's new partnership with Nike — a story [recently covered by Quartz](#). Limited growth in Nike clothing first-party listings failed to compensate for this decline.

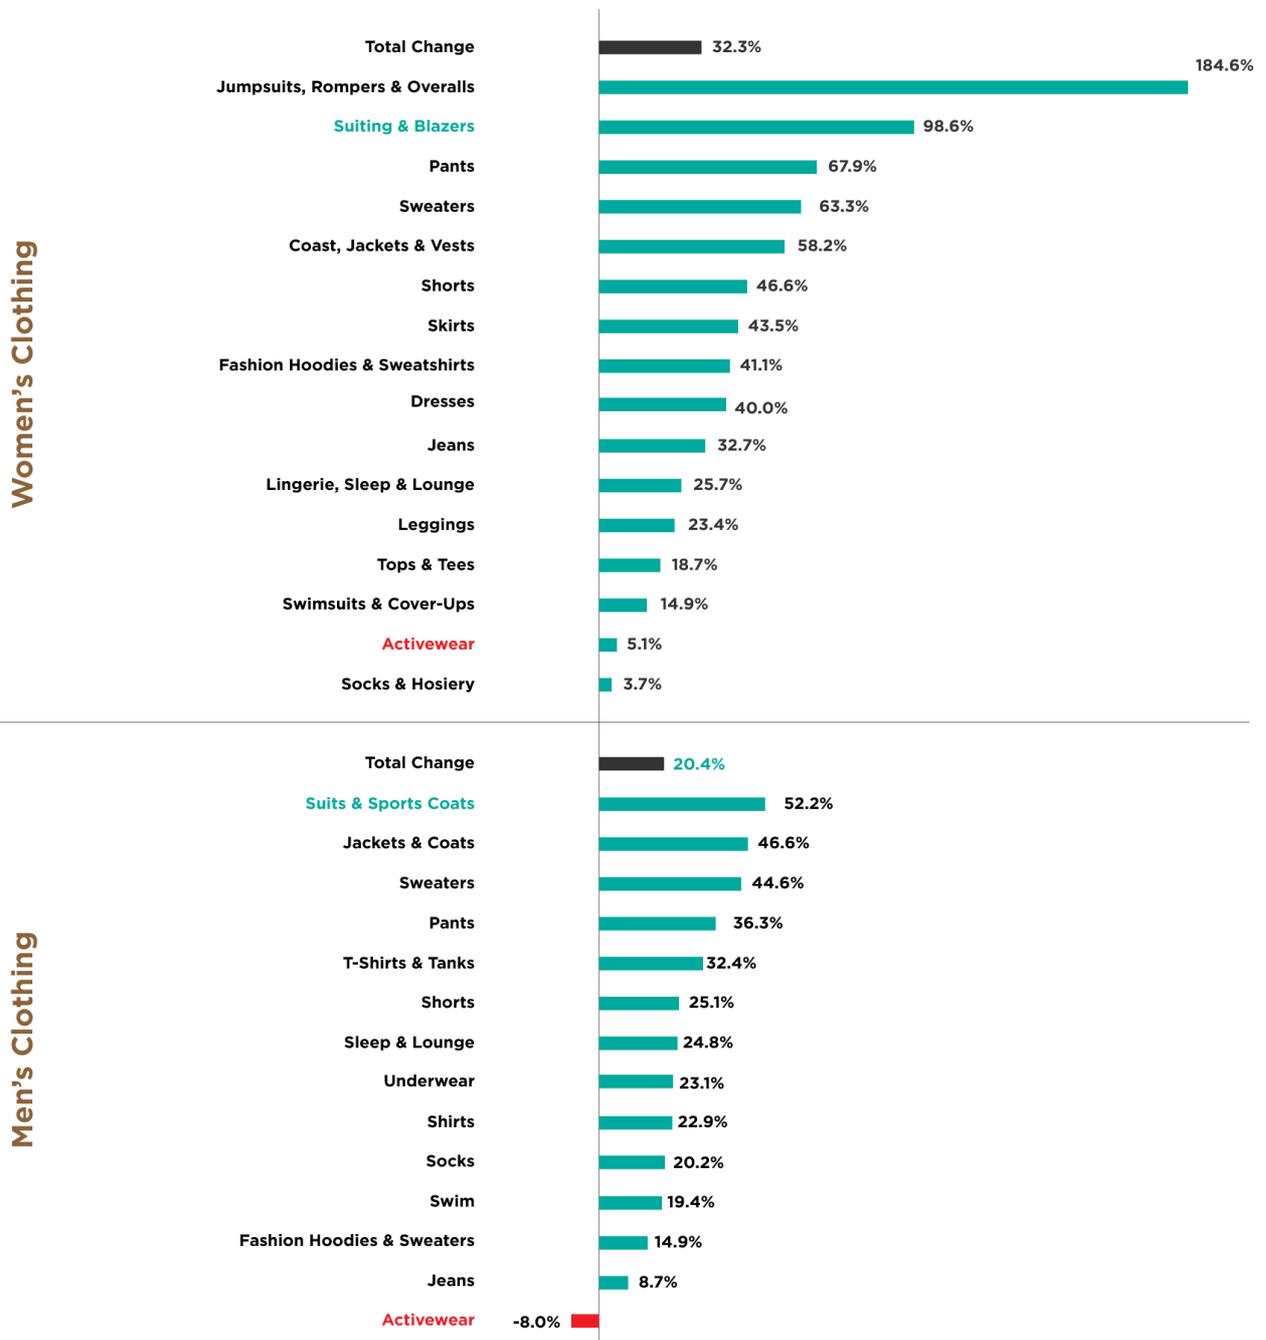

Gildan's spike in total product listings appears to be fueled by increased first-party listings off a low base. Calvin Klein's 2017 agreement to supply Amazon with products appears to be driving the Calvin Klein brand's double-digit uptick in first-party listings on Amazon Fashion.

Aéropostale's decline appears to be entirely driven by a drop in its third-party listings. The brand itself is not listed as a seller on Amazon.com.

Amazon Is Rebalancing Its Apparel Portfolio and Switching Its Focus from Sportswear To Suits

As its Fashion footprint rapidly matures, Amazon now appears to be rebalancing its portfolio with strong growth being shown in listings for formal categories such as suits and away from sportswear. We recorded a 98.6 percent increase in listings of women’s suits and blazers complemented by a 52.2 percent rise in men’s suit and sports coat listings between February and September 2018.

Generic “Non-Brands” Are Surging On Top 25 Brands List

Over the past six months, low-price generic brands have made major inroads into Amazon’s listings. Four unknown “brands” captured the top positions on the list of brands offered on Amazon Fashion. The WSPLYSPJY, Cruize and Comfy brands appear to be shipped directly to customers from China.

Rank As of Sep 2018	Brand	Feb 2018	Sep 2018	% Change	Notes
1	WSPLYSPJY	N/A	96,210	N/A	Unbranded Product; distributed from China
2	Cruize	N/A	36,303	N/A	Unbranded Product; distributed from China
3	Comfy	N/A	34,388	N/A	Unbranded Product; distributed from China
4	Fubotevic	N/A	23,365	N/A	Unbranded Product; distributed from China
5	ZeroGravitee	9,331	19,894	113.2	Unbranded Product; formerly #9
6	Gildan	14,085	19,549	38.8	
7	Hanes	12,854	16,380	27.4	
8	Calvin Klein	13,623	15,219	11.7	
9	Sport-Tek	12,149	10,142	-16.5	
10	Ralph Lauren	7,967	9,392	17.9	
11	Nike	16,764	9,051	-46.0	Formerly #1
12	Adidas	8,579	9,013	5.1	
13	Bella	7,771	8,816	13.4	
14	Port Authority	10,831	8,724	-19.5	
15	Alfani	6,794	8,676	27.7	
16	Tommy Hilfiger	5,949	8,593	44.4	
17	Next Level	15,426	7,826	-49.3	Formerly #3
18	KXP	N/A	7,666	N/A	
19	Under Armour	6,650	7,295	9.7	
20	Wild Bobby	6,248	6,699	7.2	
21	Polo Ralph Lauren	6,037	6,397	6.0	
22	Columbia	5,324	5,945	11.7	
23	Fruit of the Loom	4,956	5,849	18.0	
24	Vapor Apparel	7,113	5,702	-19.8	
25	Harriton	6,169	5,573	-9.7

Source: Coresight/DataWeave (Amazon Fashion: Top 25 Brands' Number of Listings, February 2018 vs. September 2018)

WSPLYSPJY alone accounts for fully 8.6 percent of Amazon men's and women's clothing listings. Cruiize accounts for a further 3.2 percent of listings while Comfy chips in another 3.1 percent.

Amazon Appears To be Executing A Strategic Pivot

Amazon's fashion offering is fast maturing. We saw substantial growth in the number of listings for more formal categories. The realignment in third-party listings by Nike together with increased first-party listings for Calvin Klein and Gildan appear to be driven by alliances with Amazon.

Simultaneously, ultralow-price generic clothing items delivered on order from China have inundated the "Most-Listed Products" rankings. Third parties now represent nearly 90 percent of Amazon Fashion's offering.

While Amazon Fashion shoppers enjoy a wider choice than they did even six months ago, we believe a stronger emphasis on first-party listings would grow the products eligible for Prime delivery. This tactic could strengthen Amazon Fashion's long-term appeal as a shopping destination.
